## Text and Datamining

### Definitions

**"Text and Data Mining"** means to perform extensive automated searches of Content, including data embodied therein, images, figures, interactive content and videos, the sorting, parsing, addition or removal of linguistic structures, and the selection and inclusion of Content into an index or database for purposes of classification or recognition of relations and associations.

**"TDM Output"** means the result of any Text and Data Mining activity or operation, capable of fixation, reproduction and/or communication in any form, including without limitation the creation of an index, reference, abstract, relative or absolute description or representation of Content, an algorithm, formula, metrics, method, standard or taxonomy describing or based on Content, a relational expression or measurement, whether scalable or not, of Content, extraction, alternative representation or translation, expression or discussion of any extracts from mined Content, whether in the form of a direct extraction or a representation in any form which is based on Content.

### 1. Licensed uses: TDM

The Institution and the Authorized Users may use all of the Content under this License Agreement, at no additional cost, in the course and for the purpose of non-commercial research:

- (a) for Text and Data Mining (TDM) by carrying out the following activities: download, extract and index information from the Content to which the Institution has access under this License Agreement. Where required, mount, load and integrate the results on a server used for the Institution's text-mining system to evaluate and interpret the TDM Output.
- (b) store electronic copies of the Content on its computer or server as necessary solely to ensure efficient use on a TDM project.
- (c) use TDM Output as part of original non-commercial research solely carried out by its Authorized Users and describe or otherwise reproduce extracts and quotations from TDM Output as part of original works of authorship, e.g. research reports, research papers and research articles. Where Content is embodied, quoted or referred to, or where bibliographic metadata of Content is displayed, it should be accompanied by a DOI link that points back to the individual full text item of Content.
- (d) make the results of any TDM Output available on an externally facing server or website as long as this inclusion consists of a limited number of lines of query-dependent text of individual full text items of Content (e.g. extracts from articles or book chapters) and as long as it is done for non-commercial purposes.
